I decided to try it out I installed it and removed the old 2600 Deep dive screencast training: camtasia for mac free.. Built on the 40 nm process, and based on the Cypress graphics processor, in its Cypress XT variant, the card supports DirectX 11.. I had a brand new ATI Radeon HD 5870 that I was going to use in a PC, but never did.

Ati Radeon Hd 5870 2gbThe Radeon HD 5870 Mac Edition was a high-end graphics card by ATI, launched in June 2010.. Perfectly nice and quiet My problem now was that when I opened up a session to work on, I could hardly play through or record a simple session without an error that my CPU couldn't keep up.. Its price at launch was 479 US Dollars Maybe I should start off by saying the reason for my switch to the Radeon HD 5870.. My CPU would trip up while my session was in idle Yes, I am using a lot of processing power for my sessions, but these are sessions that I had 0 problems with prior to installing the 5870.. This Mac Pro is in a recording and mixing studio, I do not need any super powerful Video card, but I have a really big problem with the stock video card, ATI Radeon HD 2600.
